Mod pixelmon minecraft pe 1.16

Author: Wartave, XScripter0 Agosto August 1, 2016 . 210,611 views Pixelmon PE is an advanced Pokémon mod for Minecraft Pocket Edition. Although it is currently released as beta version has a lot of features and many of them work pretty well. You can capture Pokémon, duel others and use objects like Pokedex to view detailed information about your Pokémon. Also for the fact that it is still in beta is definitely very fun to use and it is definitely worth testing out! Toolbox is incompatible with this mod. It is recommended to use the SimpleCommands mod to get some of the elements. When entering a new world of survival, a Pokémon-type selection menu will be displayed. In this case we have selected the farther left option known as Bulbasaur (fat). You will have the following items by default in the inventory. Below is a detailed description of each article. Poke Ball x 5 PokeCenter Poke Dex Poké Ball To depose the Pokémon start by selecting one of the Pokémon icons in the top right corner of the screen. Then use a Poké ball to shave it. To despair, it touches the Pokémon again. Some Poké balls require a certain type of apricot to be made. Albicorns can be collected by breaking the tree that appears to be seen in the image below. There are four types of apricot: red (common), yellow (rare), blue (super rare) and black (ultra rare). They talked randomly in the world. After harvesting at least one can be planted on the ground to grow more and do not require any water to grow. Poké Ball (501) – 1 Poké Ball Up + 1 Red + 1 Poké Ball Down Poké Ball Up (504) – 3 Red Apricorn Poké Ball Down (507) – 4 Iron Needles Ultra Ball (502) – 1 Ultra Ball Up + 1 Redstone + 1 Poké Ball Down Ultra Ball Up (505) – 2 Black Apricorn + 1 Yellow Ball of Apricorno Master (503) –Ball Master Up + 1 Poké Ball + 1 Poké Ball Down Master Ball Up (506) – 2 Pink Apricorn + 3 3 3Opencorns + 1 iron swallow (to find a list of all other elements, for example. Opencorns, scroll down) Pokémon Battles & Catching Pokémon Duelist Pokémon helps your Pokémon gain experience and reach higher levels. If you want to take another Pokémon you must first challenge it in a duel and win. To start a duel on one of your Pokémon in the area that is marked in red in the image below and then tap the Pokémon you want to fight. At this point your Pokémon should depose and a menu should be displayed at the bottom of the screen displaying some different options. Attack: Attack the other Pokémon Pokémon: switch to another Pokémon backpack: opens a backpack Run: escape the battle In this case we have selected the Attack and Bulbasaur option immediately started attacking Caterpie. In the text chat will tell how much health every Pokémon has and in this case it looked like Bulbasaur was losing so we chose to escape the battle (Premere Run). If a Pokémon is injured you can use a PokeCenter to heal it. Just select the injured Pokémon and then tap the PokeCenter. PokeCenter The PokeCenter is a positionable block that can be used for healing a wounded Pokémon. Just place the block on the ground and then tap on it to heal it. PokeCenter (23) – 7 iron needles + 1 glass block + 1 red stone Pokedex This article can only be used on your Pokémon. Tap a Pokémon with the item and a window will be displayed displaying all kinds of different information. Some of the tests will be in Spanish. From now on the mod only exists as a Spanish version, but in the future it is very likely that an English version also exists. Pokedex (3000) – 2 iron swallows + 3 glass blocks + 4 red stones Level Some of the elements can be used to feed the Pokémon and help itlevel. At the moment we looked at this did not work, but as soon as the bug is fixed we will make sure to update this part. None of the articles can be made topoint. Rare Candy (3001) Thunderstone (3002) Waterstone (3003) Moonstone (3004) Leafstone (3005) Firestone (3006) Duskstone (3007) Dawnstone (3008) Other Subject/Block ID Red Apricorns (3015) Black Apricorns (3019) Purple Albicorns (3018) Yellow Apricorns (3016) Pink Apricorns (3020) Blue Apricorns (3017) Use ES File Explorer (or any other file manager app) to extract the downloaded zip file. Copy the Pixelmon PE folder in /games/com.mojang/ Open BlockLauncher and upload the textures (Texture.zip). Then use BlockLauncher to install the mod (Pixelmon PE.js). Done!
